2.4 Changing direction

When you are going one way and then you **turn** to go a different way you change **direction**.

Forces are needed to make things change direction.

This boat has pushed the water to make it turn.

This way or that way?

You will need:
a ball, a large piece of paper and two coloured marker pens

Arun and Zara are investigating how a ball changes direction when they push it.

They make a **diagram** to show their prediction. A diagram is different from a picture. Diagrams only show the things that are important. They have labels and arrows.

Arun and Zara then test their prediction.

Was their prediction correct?

Try doing this investigation.

Draw a diagram to show your prediction and your result.
Use a different colour for your prediction.

Sometimes, when a prediction is wrong you learn something new.

Were your predictions correct?

What did you learn?

Look what I can do!

- ☐ I can say how forces can make something change direction.
- ☐ I can predict what I think will happen.
- ☐ I can say if my predictions are correct or not.
- ☐ I can say how a diagram is different to a picture.
