

Maths

Unit 6 - Fractions
and Percentages.

WALT:

6Nf.03 Use knowledge of equivalence to write fractions in their simplest form.

WALT: Use knowledge of equivalence to write fractions in their simplest form.

**I can write
equivalent
fractions of a
given fraction.**

**I can find the
simplest form
of a fraction.**

**I can use
equivalence to
order fractions
with different
denominators.**

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Retrieval Practice

Write the number that is **one thousand more** than 19,039

20,039

Write the number that is **one hundred less** than 19,039

18,939

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Homework

ESL - Workbook sections 2.3 +
2.4,

Maths - Workbook pages 77 - 85.

Science - Worksheet

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Starter – What is equivalence?

1 Pound sterling equals

35,174.08

Vietnamese dong

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Equivalent fractions are fractions that are an equal amount but written with a different numerator and denominator.

For example: $\frac{1}{4}$ is equivalent to $\frac{2}{8}$

WALT: Use knowledge of equivalence to write fractions in their simplest form.

We can use fraction walls to help us find equivalent fractions.

<https://www.visnos.com/demos/fraction-wall>

On your whiteboards write some fractions you think are equivalent.

We will use the fraction wall to check them.

WALT: Use knowledge of equivalence to write fractions in their simplest form.

6Nf.03 Use knowledge of equivalence to write fractions in their **simplest** form.

What is meant by the **simplest** form?

The simplest form of a fraction is when the numerator and denominator do not have any common factors (other than 1).

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Let's look at how to simplify a fraction together.

$$\frac{4}{16}$$

We know that 4 and 16 are both even.

This means they both have a factor of 2.

This means we can divide both the numerator and the denominator by 2.

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Let's look at how to simplify a fraction together.

$$\frac{2}{8}$$

We know that 2 and 8 are both even.

This means they both have a factor of 2.

This means we can divide both the numerator and the denominator by 2.

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Let's look at how to simplify a fraction together.

- $$\frac{1}{4}$$

1 and 4 have no common factors (other than 1) so this fraction is in its simplest form.

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Let's look at how to simplify a fraction together.

- $\frac{4}{16}$ While the previous method of simplifying the fraction in stages works it is quicker to divide by the largest factor we know straight away.

What is the largest factor of 4 and 16?

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Let's look at how to simplify a fraction together.

• **1**

—
4

If we divide both 4 and 16 by four we get 1 and 4.

1 and 4 have no common factors (other than 1) so this fraction is in its simplest form.

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Check your understanding

1. Write a fraction equivalent to $\frac{1}{3}$.
2. Write $\frac{15}{35}$ in its simplest form.
3. Which of these fractions is bigger? How do you know?

$$\frac{14}{16}$$

$$\frac{26}{32}$$

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Check your understanding

1. Write a fraction equivalent to $\frac{1}{3}$. $\frac{2}{6}$ $\frac{3}{9}$ $\frac{4}{12}$ *etc.*

2. Write $\frac{15}{35}$ in its simplest form. $\frac{3}{7}$

3. Which of these fractions is bigger? How do you know?

$$\frac{14}{16}$$

$$\frac{26}{32}$$

WALT: Use knowledge of equivalence to write fractions in their simplest form.

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Write an equivalent fraction for each fraction listed

Fraction	$\frac{1}{2}$	$\frac{4}{5}$	$\frac{5}{7}$	$\frac{3}{8}$	$\frac{10}{20}$
Equivalent Fraction					

Write each of the fractions in its simplest form.

Fraction	$\frac{10}{20}$	$\frac{16}{24}$	$\frac{18}{30}$	$\frac{21}{77}$	$\frac{81}{108}$
Simplified Fraction					

Put these fractions in order from smallest to greatest.

a) $\frac{7}{14}$ $\frac{13}{28}$ $\frac{12}{21}$ $\frac{3}{7}$ $\frac{34}{35}$

b) $\frac{8}{12}$ $\frac{3}{6}$ $\frac{11}{24}$ $\frac{10}{18}$ $\frac{1}{3}$

Finished everything?

Write your own questions about finding the simplest form of fractions.

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Write an equivalent fraction for each fraction listed

Fraction	$\frac{1}{2}$	$\frac{4}{5}$	$\frac{5}{7}$	$\frac{3}{8}$	$\frac{10}{20}$
Equivalent Fraction	$\frac{2}{4}$	$\frac{8}{10}$	$\frac{10}{14}$	$\frac{6}{16}$	$\frac{5}{10}$

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Write each of the fractions in its simplest form.

Fraction	$\frac{10}{20}$	$\frac{16}{24}$	$\frac{18}{30}$	$\frac{21}{77}$	$\frac{81}{108}$
Simplified Fraction	$\frac{1}{2}$	$\frac{2}{3}$	$\frac{3}{5}$	$\frac{3}{11}$	$\frac{3}{4}$

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Put these fractions in order from smallest to greatest.

a)

$\frac{7}{14}$	$\frac{13}{28}$	$\frac{12}{21}$	$\frac{3}{7}$	$\frac{34}{35}$
$\frac{3}{7}$	$\frac{13}{28}$	$\frac{7}{14}$	$\frac{12}{21}$	$\frac{34}{35}$

b)

$\frac{8}{12}$	$\frac{3}{6}$	$\frac{11}{24}$	$\frac{10}{18}$	$\frac{1}{3}$
$\frac{1}{3}$	$\frac{11}{24}$	$\frac{3}{6}$	$\frac{10}{18}$	$\frac{8}{12}$

WALT: Use knowledge of equivalence to write fractions in their simplest form.

**I can write
equivalent
fractions of a
given fraction.**

**I can find the
simplest form
of a fraction.**

**I can use
equivalence to
order fractions
with different
denominators.**

WALT: Use knowledge of equivalence to write fractions in their simplest form.

Plenary -

- Mr. Rhys has three equivalent fractions in a set:

$$\frac{1}{5} \quad \frac{2}{10} \quad \frac{4}{20}$$

Can the fraction $\frac{3}{15}$ be in this set? Why / Why not?
