

Maths

Unit 6 - Fractions and Percentages.

WALT:

6Nf.08 Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

**I can compare
values using $<$
 $=$ and $>$.**

**I can order
values.**

**I can correct
and explain
mistakes when
comparing and
ordering
values.**

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

Retrieval Practice

Carlos says,

The number fifteen thousand nine hundred and forty three is divisible by 5

Is he correct?

☐

Yes

☒

No

Explain how you know.

15,943 doesn't end in a 5 or a 0. Every multiple of 5 ends in a 5 or a 0.

[1]

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

Starter – Which of these values is the largest?

0.4

5%

$$\frac{40}{99}$$

How do you know?

What do the following symbols mean?

$=$

greater than

$<$

less than

$\geq$

equal to

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

We can compare decimals, fractions and percentages using the $<$ $=$ and $>$ symbols.

To do this we can convert them so they are in the same format.

0.8

9%

80%

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

We can compare decimals, fractions and percentages using the $<$ $=$ and $>$ symbols.

To do this we can convert them so they are in the same format.

0.8 $>$ 9%

0.09

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

We can compare decimals, fractions and percentages using the $<$ $=$ and $>$ symbols.

60
%

$\frac{1}{5}$

0.06

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

Check your understanding

1. Use the $<$ $=$ and $>$ symbols to compare these values.

0.99		90%	
0.99	90%	50%	
$\frac{1}{5}$	50%		
0.75	$\frac{3}{4}$		
0.75		0.99	90%
		$\frac{1}{5}$	50%
		0.75	$\frac{3}{4}$

2. Put these values in order from smallest to greatest.

0.55

$\frac{3}{5}$

6%

6%

0.55

$\frac{3}{5}$

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

Use the $<$ $=$ and $>$ symbols to compare the values.

a) $\frac{7}{10}$

7%

b) 0.5

5%

c) 0.88

$\frac{22}{25}$

d) 30%

$\frac{3}{100}$

e) 30%

0.31

f) $\frac{8}{5}$

1.7

Put these values in order from smallest to largest.

a) $\frac{3}{5}$ 34% 0.3

b) 0.7 8% $\frac{70}{101}$

c) 103% $\frac{1}{3}$ 1.3

Ms. Alice says, "0.43 is bigger than 0.5 because 43 is bigger than 5." Explain why she is incorrect.

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

Use the $<$ $=$ and $>$ symbols to compare the values.

a) $\frac{7}{10} > 7\%$

b) $0.5 > 5\%$

c) $0.88 = \frac{22}{25}$

d) $30\% > \frac{3}{100}$

e) $30\% < 0.31$

f) $\frac{8}{5} < 1.7$

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

Put these values in order from smallest to largest.

a) $\frac{3}{5}$ 34% 0.3

0.3, 34%, $\frac{3}{5}$

b) 0.7 8% $\frac{70}{101}$

8%, $\frac{70}{101}$, 0.7

c) 103% $\frac{1}{3}$ 1.3

$\frac{1}{3}$, 103%, 1.3

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

Ms. Alice says, "0.43 is bigger than 0.5 because 43 is bigger than 5." Explain why she is incorrect.

Ms. Alice is wrong because 0.5 is not 5 hundredths it is 5 tenths which is equivalent to 50 hundredths. 0.43 is 43 hundredths. 50 hundredths is more than 43 hundredths. Therefore 0.5 is greater than 0.43.

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

**I can compare
values using $<$
 $=$ and $>$.**

**I can order
values.**

**I can correct
and explain
mistakes when
comparing and
ordering
values.**

WALT: Understand the relative size of quantities to compare and order numbers with one or two decimal places, proper fractions with different denominators and percentages using the symbols $<$ $=$ and $>$.

Plenary

Look what I can do!

- ☐ I can reduce fractions to their simplest form.
- ☐ I can recognise fractions, decimals and percentages that have equivalent values.
- ☐ I can compare fractions, decimals and percentages using the symbols $=$, $>$ and $<$.
- ☐ I can order fractions, decimals and percentages.

What can you do if you are not sure about any of these “I can....” statements?
