Maths

Unit 8 – Addition and subtraction.

WALT: To add and subtraction fractions

WALT: Estimate, add and subtract fractions with different denominators.

I can add and subtract mixed numbers with varying denominators.

I can answer worded problems involving adding and subtracting fractions.

WALT: Estimate, add and subtract fractions with different denominators**.**

Retrieval Practice

26 Hassan has 2.4 metres of string.
He cuts a piece off the string and gives this to Mike.

Mike cuts his piece of string into two equal pieces.
Each of these two pieces is 30 centimetres long.

Complete the sentence.

Hassan gives ..... % of his string to Mike.

WALT: Estimate, add and subtract fractions with different denominators**.**

Starter –

$$\frac{2}{3} + \frac{4}{10} =$$

Write a step by step explanation on how to answer this question.

WALT: Estimate, add and subtract fractions with different denominators.

In your books, answer the following questions.

$\frac{9}{12} + \frac{3}{5} = 1\frac{21}{60}$

$\frac{7}{8} - \frac{4}{9} = \frac{31}{72}$

$\frac{7}{10} + \frac{5}{16} = 1\frac{1}{80}$

$\frac{8}{12} - \frac{2}{24} = \frac{7}{12}$

WALT: Estimate, add and subtract fractions with different denominators**.**

$^{7}/_{12}$ of a bag of sweets are red and $^{1}/_{8}$ are blue. What fraction of all the sweets are red and blue?

$$\frac{17}{24}$$

WALT: Estimate, add and subtract fractions with different denominators.

Your Task

Complete these addition and subtraction questions. Make sure to simplify your answers.

a) $\frac{2}{9} + \frac{5}{6} =$

b) $\frac{11}{12} - \frac{4}{7} =$

c) $\frac{6}{7} + \frac{1}{2} =$

d) $\frac{10}{13} - \frac{2}{3} =$

e) $1\frac{3}{4} + 1\frac{1}{3} =$

f) $1\frac{1}{10} + \frac{1}{6} =$

Complete these multi-step addition and subtraction word questions.

a) Mr. Cornel and Mr. Jon **each** have an identical pie.

Mr. Cornel eats $\frac{7}{11}$ of his pie.

Mr. Jon eats $\frac{3}{7}$ of his pie.

Mr. Jon says, "We still have more than 1 whole pie left." Is he correct? Explain how you know.

_____

_____

b) Mr. David has 2 hours to get to his destination.

He walks for $\frac{1}{2}$ of an hour.

Then he rests for $\frac{1}{5}$ of an hour.

Then he walks for a further $1\frac{4}{10}$ of an hour.

Does he reach his destination on time? _____

As a fraction of an hour, how late / early is he? _____

WALT: Estimate, add and subtract fractions with different denominators.

Your Task

Pick 5 questions to answer in your notebooks.
Answer the rest as revision for the end of unit test!

1. You give $^1/_3$ of box of brownies to Ella and $^1/_6$ of the pan of brownies to Nick. How much of the box of brownies did you give away?

2. James went out for a long walk. He walked $^3/_4$ mile and then sat down to take a rest. Then he walked $^1/_8$ of a mile. How far did he walk altogether?

3. Sam walks $^7/_8$ of a mile to school. Alice walks $^1/_2$ of a mile to school. How much farther does Sam walk than Alice?

4. Billy made two types of cookies. He used $^2/_3$ cup of sugar for one recipe and $^1/_4$ cup of sugar for the other. How much sugar (in cups) did he use in all?

7. A jug contains $^3/_4$ pints of orange juice. After you pour $^5/_8$ of a pint into a glass, how much is left in the jug?

8. Jackie has $^1/_3$ of a Galaxy bar. Nathan has $^4/_{12}$ of a Galaxy bar. How much do they have together?

9. At a class party $^3/_6$ of a vegetarian pizza and $^1/_3$ of a meat-feast pizza were eaten. How much pizza was eaten altogether?

10. Amy ran $^2/_3$ of a marathon. Beth ran $^5/_6$ of a marathon. Who ran farther? How much farther?

11. Liam and Sam shared a chocolate bar. Liam ate $^3/_5$ and Sam ate $^4/_{10}$. Who ate more? How much more?

WALT: Estimate, add and subtract fractions with different denominators.

I can add and subtract mixed numbers with varying denominators.

I can answer worded problems involving adding and subtracting fractions.

WALT: Estimate, add and subtract fractions with different denominators.

Plenary

Ms. Giang completes the following calculation.

$$\frac{8}{9} - \frac{1}{5} = \frac{7}{9}$$

Is she correct? Explain why.
