

Maths

Unit 2 - Numbers and Sequences

WALT: Use knowledge of square numbers to generate terms in a sequence given its position.

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

**I can list the
square numbers
up to 10×10 .**

**I can create a
position to
term rule for a
square number
sequence.**

**I can find the term
for a square
number sequence
when given the
position.**

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

Retrieval Practice

Mr. Jon lives in Vietnam. His mum lives in the UK.

Vietnam is 6 hours ahead of the UK.

Mr. Jon calls his mum at 2:30pm

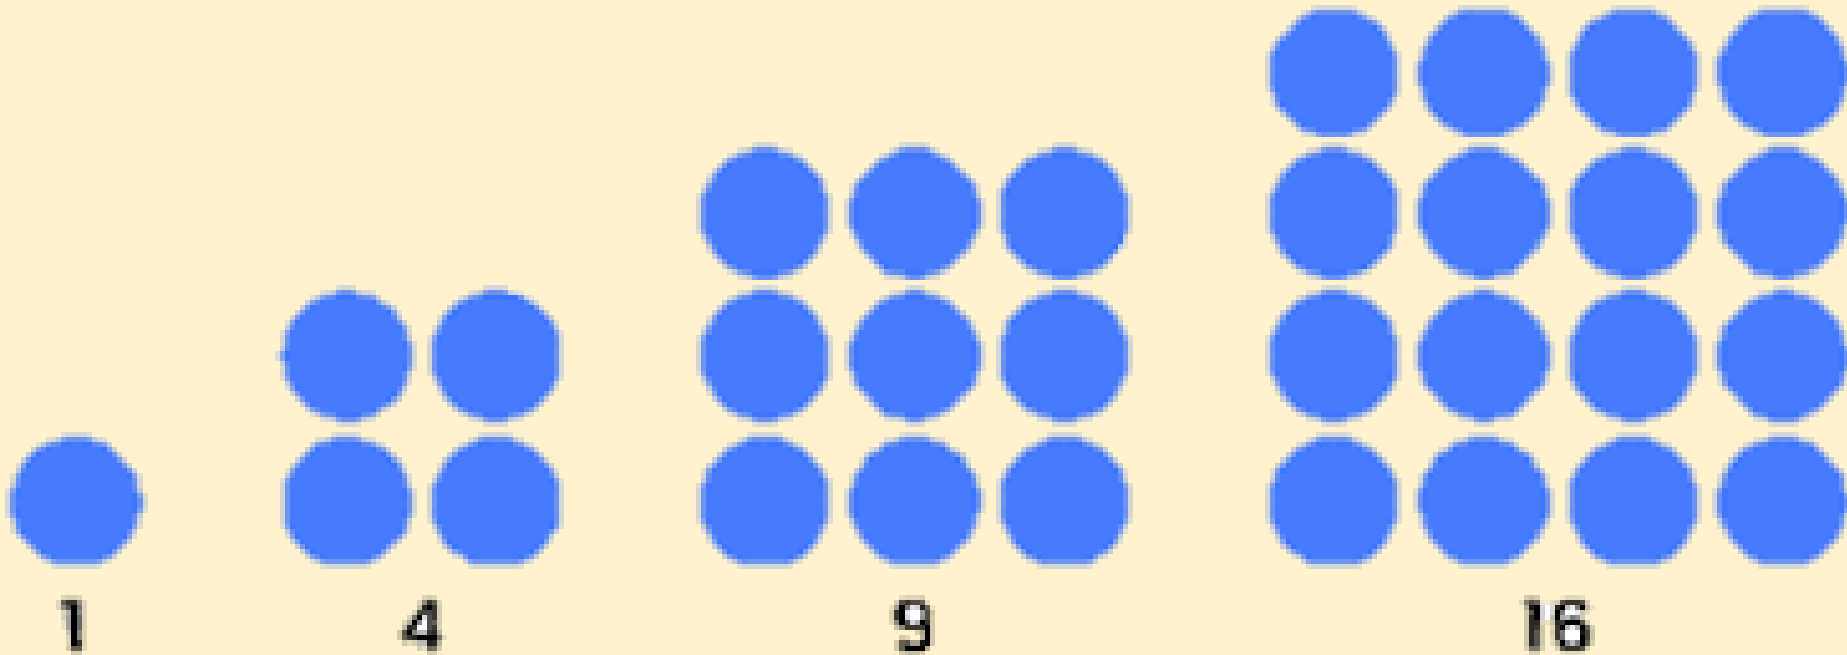

What time does his mum's phone ring in the UK?

8:30am

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

Starter - What type of sequence is this?

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

Position	Term
1	1
2	4
3	9
4	16
5	25
6	36
7	49
8	64
9	81
10	100

In your books, copy and complete this table to create a square number sequence.

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

Position	Term
1	1
2	4
3	9
4	16
5	25
6	36
7	49
8	64
9	81
10	100

What is the position to term rule for this sequence?

Multiply the position by itself

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

Using the position to term rule for a square number sequence find the term for each of these positions.

a) 12th term

144

**b) 100th
term**

10,000

c) 37th term

1,369

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

Have you seen this before? What does it mean?

$$6^2$$

This means 6 squared or 6 multiplied by itself (6 X 6).

You will see this a lot in the future when working with square numbers.

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

On your whiteboards write the following using the notation you've just learned.

a) 16 squared

16^2

b) 65 multiplied by itself

65^2

c) 89 X 89

89^2

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

I can list the square numbers up to 10×10 .

I can create a position to term rule for a square number sequence.

I can find the term for a square number sequence when given the position.

WALT: Use knowledge of square numbers to generate terms in a sequence given it's position.

Plenary

If 5^2 means 5×5 or 5 squared.

What do you think 5^3 means?
