English

Unit 3 – Living Things

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.

I can find relative clauses in a text.

I can classify relative clauses into defining and non-defining.

I can write my own defining relative clauses.

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.

My name **(0)** ……*is*…… Rosa. I live in Granada which is in the south **(6)** ……**of**…… Spain. I think it's **(7)** ……**a**…… beautiful city.

I live in a small flat **(8)** ……**with**…… my parents and my brother. He's called Manuel and he's two years older **(9)** ……**tha n**…… me. My brother and I walk to school every day. I like school and my favourite subject is maths. Our teacher gives us a **(10)** ……**lot**…… of homework, but I don't mind.

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.

Starter – Find and fix the mistakes.

There were some people were very friendly.

He gave me an apple, who is my favourite fruit.

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.

Starter – Find and fix the mistakes.

There were some people **who** were very friendly.

He gave me an apple, **which** is my favourite fruit.

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.

Relative clauses.

A relative clause gives us extra information about something or someone.

These are **non-defining relative clauses**.

E.g. Ms. Happy is a teacher, **whose lessons are interesting and engaging.**

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.

Defining relative clauses

Defining relative clauses are relative clauses which give essential information about someone or something. We need this information to understand who is being referred to.

E.g. That’s the teacher **who teaches us maths.**

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.

What do relative clauses need?

- **A relative pronoun -> this starts your relative clause.**

Pronoun:	Modifies:
that	things or people
which	things
who	people
whom	people
whose	things or people

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.

In the text find the sentences that use a relative clause.

Pg. 46

Decide if they're defining or non – defining relative clauses.

Write your own sentences using a defining relative clause.

The photos show us a food chain in action. A food chain shows the relationship between living things and their sources of food.
All animals and plants are important in our planet's **ecosystem** because all living things are part of food chains. Every animal on Earth depends upon a food chain for its survival.

A food chain always starts with a plant. In this process, the plant is called a **producer** because it makes its own food from the energy it gets from the sun.

The next **link** in the food chain is called a consumer and there are usually three levels. The first group are **primary consumers**: these are creatures who only eat plants. Some are called *herbivores*. Rabbits, mice and insects, such as grasshoppers are examples of herbivores. Some marine wildlife, such as krill, are also primary consumers.

The second group are **secondary consumers**: these are small animals like frogs, lizards, spiders, smaller birds and marine creatures such as squid and octopuses. They are *carnivores* whose main **diet** is meat. This group eats other animals in the primary consumer group.

Next, there are **tertiary consumers** who are usually larger animals like reptiles, birds or large fish. These animals eat the smaller creatures in the secondary consumer group.

There are also consumers whose food comes from plants and meat. They are called *omnivores*. These creatures can be secondary or tertiary consumers.

The top **predators** who are at the top of the food chain are lions, tigers, crocodiles, sharks and eagles. They haven't got any natural enemies. Can you think of one more top predator?

WALT: Use an increasing range of defining relative clauses (e.g. with whose and whom) and begin to use non-defining relative clauses.
