Maths

Unit 8 – Addition and subtraction.

WALT:

6Nf.05 – Estimate, add and subtract fractions with different denominators

WALT: Estimate, add and subtract fractions with different denominators.

I can add and subtract fractions with the same denominators.

I can add and subtract fractions with different denominators.

I can add and subtract mixed numbers with varying denominators.

WALT: Estimate, add and subtract fractions with different denominators.

Retrieval Practice

Here are the temperatures in four cities at midnight and at midday.

	Temperature	
City	**At midnight**	**At midday**
Paris	–4°C	–2°C
Oslo	–13°C	–7°C
Rome	3°C	10°C
Warsaw	–6°C	2°C

At **midnight**, how many degrees colder was Paris than Rome?

degrees

Which city was 6 degrees colder at midnight than at midday?

_____

WALT: Estimate, add and subtract fractions with different denominators**.**

Starter – Answer the following questions.

$\frac{3}{7} + \frac{2}{7} =$

$\frac{8}{10} + \frac{5}{10} =$

$\frac{6}{10} - \frac{3}{10} =$

$\frac{9}{10} - \frac{9}{10} =$

WALT: Estimate, add and subtract fractions with different denominators.

When adding and subtracting fractions, we need to make sure that the denominator is same.

$$\frac{2}{8} + \frac{4}{8} = \frac{6}{8}$$

$$\frac{24}{25} - \frac{4}{25} = \frac{20}{25}$$

WALT: Estimate, add and subtract fractions with different denominators.

When adding and subtracting fractions, we need to make sure that the denominator is same.

We can also simplify our answers.

What would the simplified answers be?

$$\frac{2}{8} + \frac{4}{8} = \frac{6}{8}$$

$$\frac{24}{25} - \frac{4}{25} = \frac{20}{25}$$

WALT: Estimate, add and subtract fractions with different denominators.

What happens when we are given calculations where the denominators are different?

We need to change the denominators to be the same.

We do this by finding a **common multiple** of the denominators.

$$\frac{2}{7} + \frac{3}{5} = \frac{10}{35} + \frac{21}{35}$$

What would the answer be? Remember to simplify!

WALT: Estimate, add and subtract fractions with different denominators.

What happens when we are given calculations where the denominators are different?

We need to change the denominators to be the same.

We do this by finding a **common multiple** of the denominators.

$$\frac{4}{10} + \frac{2}{6} = \frac{24}{60} + \frac{20}{60}$$

What would the answer be? Remember to simplify!

WALT: Estimate, add and subtract fractions with different denominators**.**

Check your understanding

1. Change the denominators to be the same. We do this by finding a **common multiple** of the denominators.

$$\frac{6}{10} + \frac{1}{5} =$$

$$\frac{5}{9} + \frac{3}{4} =$$

$$\frac{7}{12} + \frac{3}{10} =$$

$$\frac{1}{7} + \frac{7}{8} =$$

WALT: Estimate, add and subtract fractions with different denominators.

What happens when we are given calculations where the denominators are different?

We need to change the denominators to be the same.

We do this by finding a **common multiple** of the denominators.

$$\frac{7}{9} - \frac{2}{6} = \frac{42}{54} - \frac{18}{54}$$

WALT: Estimate, add and subtract fractions with different denominators.

What happens when we are given calculations where the denominators are different?

We need to change the denominators to be the same.

We do this by finding a **common multiple** of the denominators.

$$\frac{10}{14} - \frac{2}{3} = \frac{30}{42} - \frac{28}{42}$$

What would the answer be? Remember to simplify!

WALT: Estimate, add and subtract fractions with different denominators.

Check your understanding

1. Change the denominators to be the same. We do this by finding a **common multiple** of the denominators.

$\frac{6}{10} - \frac{4}{6} =$

$\frac{35}{45} - \frac{5}{9} =$

$\frac{5}{12} - \frac{1}{6} =$

$\frac{7}{8} - \frac{1}{2} =$

WALT: Estimate, add and subtract fractions with different denominators.

Your Task

Complete these addition and subtraction questions. Make sure to simplify your answer.

a) $\frac{2}{7} + \frac{1}{7} =$

b) $\frac{8}{9} - \frac{5}{9} =$

c) $\frac{1}{4} + \frac{1}{4} =$

d) $\frac{7}{10} - \frac{2}{10} =$

e) $\frac{2}{15} + \frac{10}{15} - \frac{3}{15} =$

f) $\frac{16}{17} - \frac{10}{17} + \frac{3}{17} =$

Complete these addition and subtraction questions. Make sure simplify your answer.

a) $\frac{2}{4} + \frac{1}{3} =$

b) $\frac{8}{10} - \frac{3}{7} =$

c) $\frac{3}{4} + \frac{1}{15} =$

d) $\frac{6}{11} - \frac{1}{2} =$

e) $\frac{1}{3} + \frac{3}{7} =$

f) $\frac{5}{8} - \frac{3}{20} =$

Complete these addition and subtraction questions. Make sure to simplify your answer.

a) $\frac{3}{4} + \frac{2}{3} =$

b) $1\frac{7}{8} - \frac{2}{5} =$

c) $\frac{5}{7} + \frac{4}{5} =$

d) $2\frac{5}{6} - 1\frac{1}{2} =$

e) $1\frac{2}{9} + 1\frac{3}{6} =$

f) $3\frac{11}{12} - 3\frac{9}{10} =$

WALT: Estimate, add and subtract fractions with different denominators.

I can add and subtract fractions with the same denominators.

I can add and subtract fractions with different denominators.

I can add and subtract mixed numbers with varying denominators.
