Maths

Unit 8 – Addition and subtraction.

WALT:

6Nf.05 – Estimate, add and subtract fractions with different denominators

WALT: Estimate, add and subtract fractions with different denominators.

I can add and subtract mixed numbers with varying denominators.

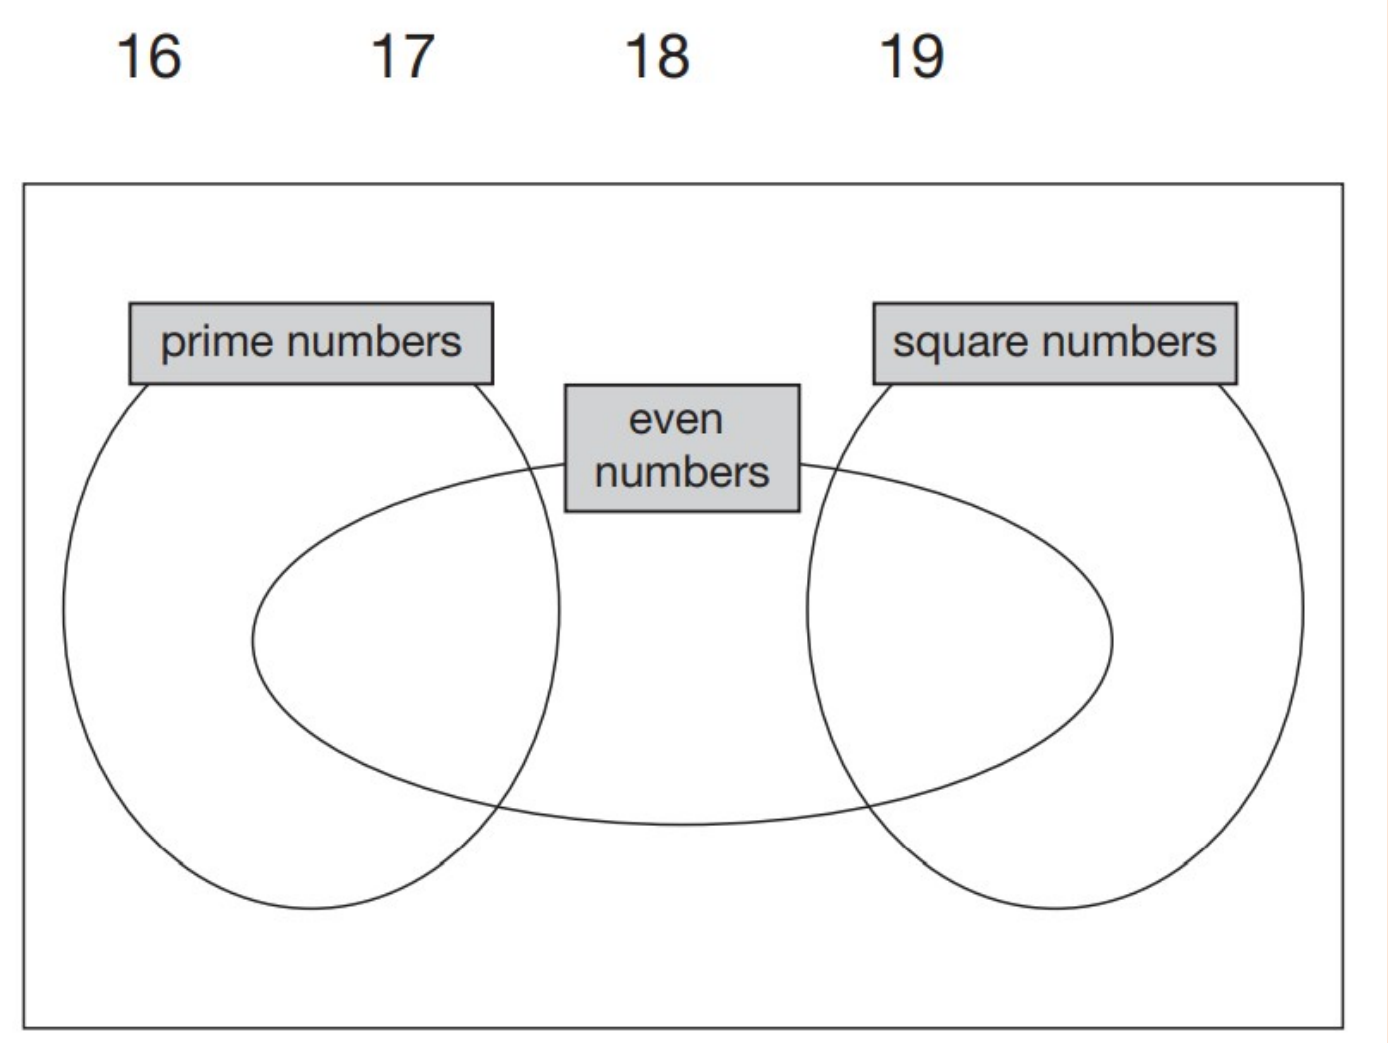

I can answer worded problems involving adding and subtracting fractions.

I can create a RAFT based on adding and subtracting fractions.

WALT: Estimate, add and subtract fractions with different denominators**.**

Retrieval Practice

WALT: Estimate, add and subtract fractions with different denominators**.**

Starter – Answer the following questions.

$\frac{3}{5} + \frac{7}{10} =$

$\frac{3}{4} + \frac{2}{5} =$

$\frac{8}{10} - \frac{4}{6} =$

$\frac{15}{20} - \frac{5}{15} =$

WALT: Estimate, add and subtract fractions with different denominators.

Last lesson, we learnt that when adding or subtracting fractions, the denominators must be the same.

How do we do this?

$$\frac{4}{6} + \frac{3}{4} = \frac{17}{12}$$

What can I do to this improper fraction?

Make it into a mixed number.

$$1\ \frac{5}{12}$$

WALT: Estimate, add and subtract fractions with different denominators.

Check your understanding

$\frac{5}{7} + \frac{3}{4} = 1\frac{13}{28}$

$\frac{29}{30} - \frac{5}{7} = \frac{53}{21}$

0

$\frac{8}{20} + \frac{17}{25} = 1\frac{2}{25}$

$\frac{11}{15} - \frac{3}{30} = \frac{19}{30}$

WALT: Estimate, add and subtract fractions with different denominators.

What happens when we have mixed numbers?

$$1\frac{3}{5} + 4\frac{3}{4} = 6\frac{7}{20}$$

First, we need to look at the fractions and find a common multiple for the denominator.

Then we can calculate the addition. If the answer is an improper fraction, we need to change it to a mixed number.

Finally, we add the wholes from our original mixed numbers.

WALT: Estimate, add and subtract fractions with different denominators.

Check your understanding

$$4\frac{9}{10} + 2\frac{3}{4} = 2\frac{3}{20}$$

$$5\frac{2}{3} - 2\frac{2}{7} = 3\frac{8}{21}$$

$$4\frac{3}{4} - 1\frac{2}{8} = 3\frac{1}{2}$$

WALT: Estimate, add and subtract fractions with different denominators**.**

Check your understanding

Ms. Giang and Ms. Phuong have the same amount of pizza.

Ms. Giang eats $\frac{5}{7}$ of her pizza.

Ms. Phuong eats $\frac{2}{8}$ of her pizza.

Ms. Giang says, “We have more than 1 whole pizza left”.

Is she correct?

WALT: Estimate, add and subtract fractions with different denominators.

Your Task

Complete these addition and subtraction questions. Make sure to simplify your answers.

a) $\frac{2}{9} + \frac{5}{6} =$

b) $\frac{11}{12} - \frac{4}{7} =$

c) $\frac{6}{7} + \frac{1}{2} =$

d) $\frac{10}{13} - \frac{2}{3} =$

e) $1\frac{3}{4} + 1\frac{1}{3} =$

f) $1\frac{1}{10} + \frac{1}{6} =$

Complete these multi-step addition and subtraction word questions.

a) Mr. Cornel and Mr. Jon **each** have an identical pie.

Mr. Cornel eats $\frac{7}{11}$ of his pie.

Mr. Jon eats $\frac{3}{7}$ of his pie.

Mr. Jon says, "We still have more than 1 whole pie left." Is he correct? Explain how you know.

_____

_____

b) Mr. David has 2 hours to get to his destination.

He walks for $\frac{1}{2}$ of an hour.

Then he rests for $\frac{1}{5}$ of an hour.

Then he walks for a further $1\frac{4}{10}$ of an hour.

Does he reach his destination on time? _____

As a fraction of an hour, how late / early is he? _____

WALT: Estimate, add and subtract fractions with different denominators.

Your Task

Role	Audience	Format	Topic
Checkpoint test writer	Stage 6 students	Exam question(s)	Estimating, adding and subtracting fractions with different denominators.
Game designer	Primary school aged children.	A board game	A game that involves estimating, adding, and subtracting fractions. The game should be both fun and challenging, with clear rules and instructions.
Influencer	Followers	A video	The video should explain to their followers how to add and subtract fractions with different denominators.

WALT: Estimate, add and subtract fractions with different denominators.

I can add and subtract mixed numbers with varying denominators.

I can answer worded problems involving adding and subtracting fractions.

I can create a RAFT based on adding and subtracting fractions.

WALT: Estimate, add and subtract fractions with different denominators.

Plenary

Ms. Giang completes the following calculation.

$$\frac{8}{9} - \frac{1}{5} = \frac{7}{9}$$

Is she correct? Explain why.
