To go **faster** on a bike you push on the **pedals**.

To go **slower** you pull on the **brakes**.

Going faster is called **speeding up**.
Going slower is called **slowing down**.

Your **speed** is how **fast** you are moving.

When something speeds up or slows down it is because of a force.

brakes	slow
explain	slower
fast	slow down
faster	speed
pedals	speed up

Look what I can do!

- [ ] I can say how forces can make something move faster or slower.
- [ ] I can ask questions about how to make something move faster or slower.
- [ ] I can find patterns in my results.
- [ ] I can investigate carefully and safely.
