Maths

Unit 3 – Averages

27.10.2026

WALT: To find and interpret the mode, median, mean and range.

WALT: Find and interpret the mode, median, mean and range.

I can find the mean, mode, median and range of a data set.

I can find and interpret the mean, mode, median and range of a data set.

When given the mode, median, mean or range I can write my own data set.

WALT: Find and interpret the mode, median, mean and range.

Retrieval Practice

Safia starts at 52 and counts backwards in sevens.
Mia starts at −10 and counts forwards in nines.

Write the number that they both say.

17

..... [1

WALT: Find and interpret the mode, median, mean and range.

Starter – Look at the following data set.

1, 1, 3, 5, 6, 7, 7, 8

Ms. Colette says, **“The modes are 1 and 7. The medians are 5 and 6.”**

Is she correct? Explain your answer.

WALT: Find and interpret the mode, median, mean and range.

TTYP - what is the:

Mode

Median

Mean

Range

WALT: Find and interpret the mode, median, mean and range.

I gave the same test to some grade 3 students and some grade 5 students. The results are in a table below.

Grade 3 Scores /10	Grade 5 Scores /10
4	7
2	8
6	6
1	9
2	10

Copy and complete this table on your whiteboards.

	Grade 3 Scores	Grade 5 Scores
Mode	2	No mode
Median	2	8
Mean	3	8
Range	5	4

WALT: Find and interpret the mode, median, mean and range.

Here are the results. Let's interpret the data.

	Grade 3 Scores	Grade 5 Scores
Mode	2	No mode
Median	2	8
Mean	3	8
Range	5	4

What does the mode show us?

What does the median show us?

What does the mean show us?

WALT: Find and interpret the mode, median, mean and range.

Check your understanding

I measured the height of different children in grade 5. Here is what I found.

Height of children in 5B1	**140 cm**	**140 cm**	**130 cm**	**154 cm**	**121 cm**
Height of children in 5B2	**125 cm**	**137 cm**	**163 cm**	**140 cm**	**145 cm**

Find the mode, mean, median and range from this set of data.

What conclusion can you make from this data?

WALT: Find and interpret the mode, median, mean and range.

Check your understanding

Height of children in 5B1	**140 cm**	**140 cm**	**130 cm**	**154 cm**	**121 cm**
Height of children in 5B2	**125 cm**	**137 cm**	**163 cm**	**140 cm**	**145 cm**

	Mode	Mean	Median	Range
Height of children in 5B1	**140 cm**	**137 cm**	**140 cm**	**33 cm**
Height of children in 5B2	**No mode**	**142 cm**	**140 cm**	**38 cm**

What conclusion can you make from this data?

WALT: Find and interpret the mode, median, mean and range.

Mr. Jon is writing his own set of data.

He wants his data to have a mean of 5, a mode of 6 and a median of 6. What could his set be?

5 → x5 → 25

25 needs to be decomposed to have a mode of 6 and also a median of 6.

25 = 3 + 3 + 6 + 6 + 6

The set of data is: 3, 3, 6, 6, 6

WALT: Find and interpret the mode, median, mean and range.

WALT: Find and interpret the mode, median, mean and range.

A group of scientists measured the heights of 10 trees in Vietnam and 10 trees in Finland. They displayed their results in the tables below.

Heights of trees in Vietnam

Tree	1	2	3	4	5	6	7	8	9	10
Height in cm	235cm	321cm	201cm	232cm	304cm	341cm	213cm	311cm	299cm	203cm

Heights of trees in Finland

Tree	1	2	3	4	5	6	7	8	9	10
Height in cm	57cm	123cm	156cm	276cm	178cm	201cm	302cm	101cm	89cm	247cm

Fill out the table below

	Mode	Median	Mean	Range
Trees in Vietnam				
Trees in Finland				

Answer the questions below.

a) What did you notice about the mode? Why do you think this is?

b) What conclusions can you draw from the data collected?

Write a data set that has a:

Mode of 11

Mean of 10

Median of 15

Range of 20

WALT: Find and interpret the mode, median, mean and range.

	Mode	Median	Mean	Range
Trees in Vietnam	No mode	267cm	266cm	140cm
Trees in Finland	No mode	167cm	173cm	245cm

WALT: Find and interpret the mode, median, mean and range.

Write a data set that has a:

Mode of 11

Mean of 17

Median of 15

Range of 20

One answer is:
11, 11, 11, 11, 15, 15, 16, 16, 16, 17, 31

Mode = 11 (4 11s)
Mean = 17
(11+11+11+11+15+15+16+16+16+17+31 = 170. 170 divided 10 = 17)
Median = 15 (two numbers in the middle.)
Range = 20 (31 – 11)

WALT: Find and interpret the mode, median, mean and range.

I can find the mean, mode, median and range of a data set.

I can find and interpret the mean, mode, median and range of a data set.

When given the mode, median, mean or range I can write my own data set.
