

Maths

**Unit 6 - Fractions
and Percentages.**

22.09.2026

WALT:

6Nf.01: Understand that a fraction can be represented as a division of the numerator by the denominator.

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

**I can represent
division as a
fraction.**

**I can complete a
table that shows
the relationship
between division
and fractions.**

**I can explain to a
grade 4 the
relationship
between
fractions and
division.**

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Retrieval Practice

Last Lesson Mr. Jon says, "In algebra, we can show a multiplication like this '8a'. This means $8 \times a$." Is he correct? Explain your answer.	Last Week On Tuesday, the temperature is 9°C. Overnight the temperature falls by 15°C. What is the temperature in the morning?														
Last Unit a) Here is an equation.  + = 12 Find six possible pairs of values for the circle and square. <table><tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr></table>															Last Year How many degrees are <u>in</u>: a) Acute angle b) Obtuse angle c) Right angle d) Reflex angle
															
															

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Starter - Which of these is the odd one out? Why?

Eight divided by four.

$$\frac{8}{4}$$

$$2$$

$$8 \div 4 =$$

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Write a number sentence to show the calculation represented below.

Three pizzas shared between four people.

$$3 \div 4 =$$

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Write a number sentence to show the calculation represented below

What fraction of a pizza will each person receive?

$$\frac{3}{4}$$

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

From this example we can see that:

$$3 \div 4 = \text{is equivalent to } \frac{3}{4}$$

What similarities and differences do you notice between the number sentence and the fraction?

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Here is another example:

If I had 5 brownies and wanted to share them between 8 friends, how could it be represented?

$$5 \div 8 = \text{is equivalent to } \frac{5}{8}$$

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Check your understanding

Represent the divisions as fractions.

$$3 \div 8 = \frac{3}{8}$$

$$2 \div 3 = \frac{2}{3}$$

$$5 \div 9 = \frac{5}{9}$$

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Represent these divisions as fractions.

a) 6 divided by 5

b) 5 divided by 6

c) 2 divided by 3

d) 8 divided by 10

e) 9 divided by 4

f) thirteen divided by fourteen

Complete the table showing the relationship between division and fractions.

Six divided by seven.	$6 \div 7 =$	$\frac{6}{7}$
	$4 \div 5 =$	
Eight divided by ten.		
		$\frac{10}{5}$

Write an explanation to a grade 4 about the relationship between division and fractions.

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Represent these divisions as fractions.

a) 6 divided by 5

$$\frac{6}{5}$$

c) 2 divided by 3

$$\frac{2}{3}$$

e) 9 divided by 4

$$\frac{9}{4}$$

b) 5 divided by 6

$$\frac{5}{6}$$

d) 8 divided by 10

$$\frac{8}{10}$$

f) thirteen divided by fourteen

$$\frac{13}{14}$$

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Complete the table showing the relationship between division and fractions.

Six divided by seven.	$6 \div 7 =$	$\frac{6}{7}$
Four divided by five	$4 \div 5 =$	$\frac{4}{5}$
Eight divided by ten.	$8 \div 10 =$	$\frac{8}{10}$
Ten divided by five	$10 \div 5 =$	$\frac{10}{5}$

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

I can represent division as a fraction.

I can complete a table that shows the relationship between division and fractions.

I can explain to a grade 4 the relationship between fractions and division.

WALT: Understand that a fraction can be represented as a division of the numerator by the denominator.

Plenary -

Which is greater $\frac{1}{2}$ of \$15
or $\frac{1}{4}$ of \$40?
